EQUIPMENT

Sorcery points: you have a maximum number of sorcery points equal to $\text{ceil}(\text{charisma score}/(1+10/\text{level})) \times \text{level}$.

You regain these sorcery points at a rate of $\text{ceil}(\text{charisma}/(1+10/\text{level}))$ per hour of resting.

You use these sorcery points to cast spells (see page 3) and to put metamagic options onto your spells (see page 4).

You have a number of spells known by you equal to $1 + \text{level}$, plus a number of cantrips known to you equal to $3 + \text{ceil}(\text{level}/3)$. At level 10, you can expend a number of sorcery points equal to $\text{max}(\text{level of spell being replaced}, \text{level of spell replacing it})$ to replace any known leveled spell with another Sorcerer spell of level less than or equal to $\text{ceil}(\text{your level}/2)$ (same as for learning spells earlier).

Other traits:

Darkvision: you see into 60 feet of dim light as though it were bright light and into complete darkness as if it were dim light.

Fey Ancestry: you have advantage on saving throws against being charmed, and magic can't put you to sleep.

SYMBOL

6th level ability: You can use the Distant Spell metamagic option to increase the range of the “self” component of any spell to 30 feet. If the target is a creature, the target may choose whether the spell uses an attack roll, dexterity saving throw or wisdom saving throw (a willing creature could choose for it to be an attack roll, and choose for it to hit (no roll required); this enables stacking this ability with Spell Sniper (feat) in order to, say, give a Shield spell or Mirror Image spell to an ally 60 feet away).

10th level ability: you can expend a number of sorcery points equal to $\max(\text{level of sorcerer spell you are trying to learn}, \text{level of spell you know that you are replacing})$ to replace one of your $(1 + \text{sorcerer level})$ spells with another. Once you get a subclass at 25th level (or odd epic level), those spells granted by that subclass that are not stated as directly known by you, but as options to know can be used with this ability interchangeably.

14th level ability: Choose 2 level’s worth of benefits from one of the Sorcerous Origins.

18th level ability: The cost of each metamagic option reduces by 1 (minimum 0).

20th level ability: You can expend a number of sorcery points equal to the cost of a given level of a spell ($\text{ceil}(\text{level}^2 \cdot 1.5) - 1$), your action, your bonus action, and your reaction to give a willing creature that you touch one spell slot for which they know a spell of that level. For any given level of spell slot, a creature may only have one more than their class description permits (i.e. you can give a 17th level or higher sorcerer only 1 9th level spell slot, 1 8th level spell slot, 1 7th level spell slot, 1 6th level spell slot, 1 5th level spell slot, 1 4th level spell slot, 1 3rd level spell slot, 1 2nd level spell slot, and 1 1st level spell slot (maximum for each) due to the fact that this revised sorcerer description provides for 0 of each type of spell slot, and, at that point, a different 20th level sorcerer would not be able to use this ability to give that other sorcerer spell slots).

TREASURE

Sorcery points maximum
= $\text{ceil}(\text{charisma score}/(1+10/\text{level})) * \text{level}$

SPELLS KNOWN

Metamagic options (choose up to your charisma modifier of them):

Subtle Spell cost: 1

Ignore the verbal and somatic components of spells (allows casting underwater, while tied up, in area of Silence, etc)

Elemental spell: cost 1

When you cast a spell that deals damage \in {acid, cold, fire, lightning, poison, thunder} deal another type in that set.

Twinned spell: cost: $\max(1, \text{sorcery point cost of spell}) \times (\text{number of additional targets})$

If you cast a spell that targets a creature, you target additional creatures (each one multiplying the cost).

Esoteric spell: cost: 2

When you cast a spell that deals damage \in {force, necrotic, psychic, radiant} deal another type in that set.

Extended spell: cost: (duration multiplier-1)

When you cast a spell that has a duration of 1 minute or longer, the duration is now duration*duration multiplier.

Careful spell: cost: 1

choose a number of creatures in the area of effect of a spell up to your charisma modifier to automatically succeed the saving throw.

Distant spell: cost 1

When you cast a spell with a range ≥ 5 ft, the range is doubled. Spells with range of touch have a range of 30 ft.

Empowered spell: cost 1

You have advantage on up to your charisma modifier of damage die rolls for a spell.

Heightened spell: cost 3

One target has disadvantage on the saving throw of a spell.

Kinetic spell: cost 2

A spell with a saving throw now has either a strength or dexterity saving throw.

Persistent spell: cost $3+2 \times (\text{additional durations of 6s})$

You ignore the concentration requirement of a spell for an initial duration of 6s (a round of combat) and can continue to do so for additional durations of 6s.

Quickened spell: cost: $\text{factorial}(\text{new level of speed}-\text{previous level of speed})$

You increase the level of speed at which a spell is cast between the following levels in that order:

1) 1 action

3) 1 bonus action (i.e. 2 sorcery points to cast a 1 action spell in 1 bonus action)

5) 1 reaction (i.e. 24 sorcery points to cast a 1 action spell in 1 reaction)

6) casting the spell immediately at the start of combat when you are surprised (as in, you otherwise have no action, reaction or movement when you are surprised otherwise (this can be used at higher levels to simply “nope” someone cutting your throat in your sleep)). (i.e. 120 sorcery points to cast a 1 action spell immediately at the start of combat when surprised, or 6 sorcery points to cast 1 bonus action spell immediately when surprised at the start of combat (i.e. misty step to safety), or 2 sorcery points to cast 1 reaction spell immediately when surprised at the start of combat.)

Guided spell: cost: 2

<This is the only metamagic option stackable with itself>

A spell that targets a creature and uses an attack roll has 1 level of advantage on one attack roll. This is stackable on top of having any number of levels of advantage on an attack against a target. You spend the 2 sorcery points after you know the attack misses: i.e. this metamagic option results in you continuously spending 2 sorcery points until the attack finally hits.

Warped spell: cost: 4

A spell with a saving throw now has either an intelligence or charisma saving throw.

Willful Spell: cost 2

A spell with a saving throw now has either a Constitution or Wisdom saving throw.

When you cast a spell, you can choose any of the metamagic options you have prepared (a number=charisma modifier) to be associated with that spell.

You can change which ones you have prepared after a long rest (8 hours).

Common actions (use one of these instead of making an attack or otherwise using your action in one round):

1. Dash: you gain extra movement equal to your speed for that round.
2. Disengage: you can move away from hostile creatures while avoiding opportunity attacks (which require those opponents to use their reaction to make an attack)
3. Dodge: while you have speed left and are not incapacitated, you have advantage on dexterity saving throws (roll the d20 twice and take the higher number), and attacks against you have disadvantage (roll the d20 twice and take the lower number).
4. Help: while within 5 ft of a creature, you can give that creature advantage on one ability check or attack.
5. Hide: make a Dexterity (Stealth) check to try to beat the passive perception of creatures. You can only do this while the creatures you are hiding from are unable to see you. Attacks you make from being unseen have advantage. Attacks against you towards where you actually are are at disadvantage, and attacking where an unseen target is not is an attack that automatically misses.
6. Search: depending on what kind of thing you are looking for, I will either ask you to make a Wisdom (Perception) check, or an Intelligence (Investigation) check as you devote your attention to finding something.
7. Use an object, you can do something simple with one object for free (like drawing a sword), but to use an additional object or to do something that requires more time or care will require you to use your action.

Miscellaneous things to do on your turn:

- * Going Prone: It is free to do (doesn't cost action, bonus action, movement or reaction), it imposes disadvantage on ranged attacks from more than 5 feet away and imposes disadvantage on your own attacks rolls while you are prone, but it gives advantage on attacks against you to attackers within 5 ft of you. It takes 1/2 of your movement in order to stand back up (as in, you must have at least 15 ft of movement left to get back up, more if you have other bonuses to your speed).
- * Ready action: you use your action and your reaction to do just ONE thing you could do as an action when a triggering event happens during the 6 seconds (this is very useful for archers in order to hit someone at the moment that someone drops invisibility during the course of making an attack or casting a spell (standard for the 2nd level Invisibility spell) or for a ranged attack on someone as soon as they get up from being prone).
- * Grapple: Takes 1 action. You make a Strength (Athletics) check against someone in melee, that person makes a competing check of 1d20+max(Strength (Athletics) modifier, Dexterity (Acrobatics) modifier). If the competing check fails, then the grappled target's speed is reduced to 0 and can't benefit from any feature that increases speed unless they use their action to break free of the grapple (same check) or the grappling effect (or creature) is destroyed/incapacitated.
